## Suspicious Voice Detected

Our AI engine has detected high-risk speech patterns in the current call.

RISK SCORE

**87%** **Critical**

Voice Authenticity

● **Suspicious**

Speaker Match

● **92%**

### Why was this flagged?

This call may involve **AI-generated or manipulated speech**. Voice characteristics match the claimed speaker, but synthetic speech patterns and unnatural latencies were detected.

*"Before sharing sensitive information, verify the caller using another trusted method."*

**Verify Caller**

**Continue Anyway**

TrustVoice is analyzing this call...

## Verify the Caller

### High Risk Score

Recommended because this call has elevated risk markers and potential voice synthesis detection.

#### Choose Verification Method

[How it works](#)

##### Call a trusted number

Request the caller to dial you from a pre-verified phone number.

##### Send verification request

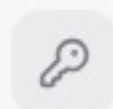

Push a real-time secure prompt to the caller's TrustVoice app.

##### Ask a trusted contact

Notify a mutual contact to verify the identity of the person calling.

##### Use MFA / OTP

The caller must provide a one-time passcode sent to their device.

##### Confirm via official channel

Redirect verification through the organization's formal support line.

**Start Verification →**

Skip for now

All verification methods use end-to-end encryption. The caller is never given direct access to your personal information.
